12. Taking an Assignment
13. Viewing Your Results

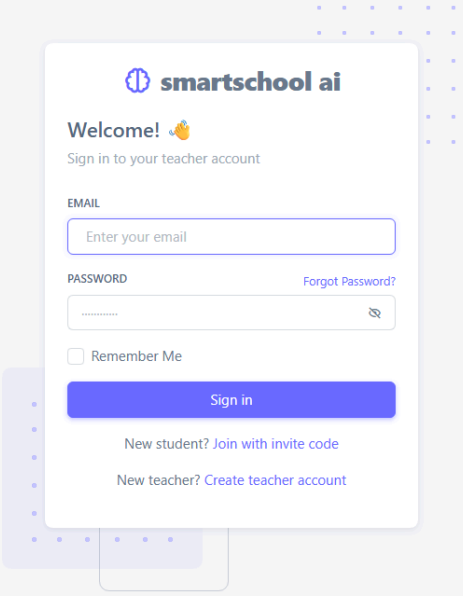

GETTING STARTED

Signing In & Creating an Account

SmartSchool AI has two kinds of accounts — teachers create and grade assignments, students join a class with an invite code and complete them. This section covers signing in and creating both kinds of accounts.

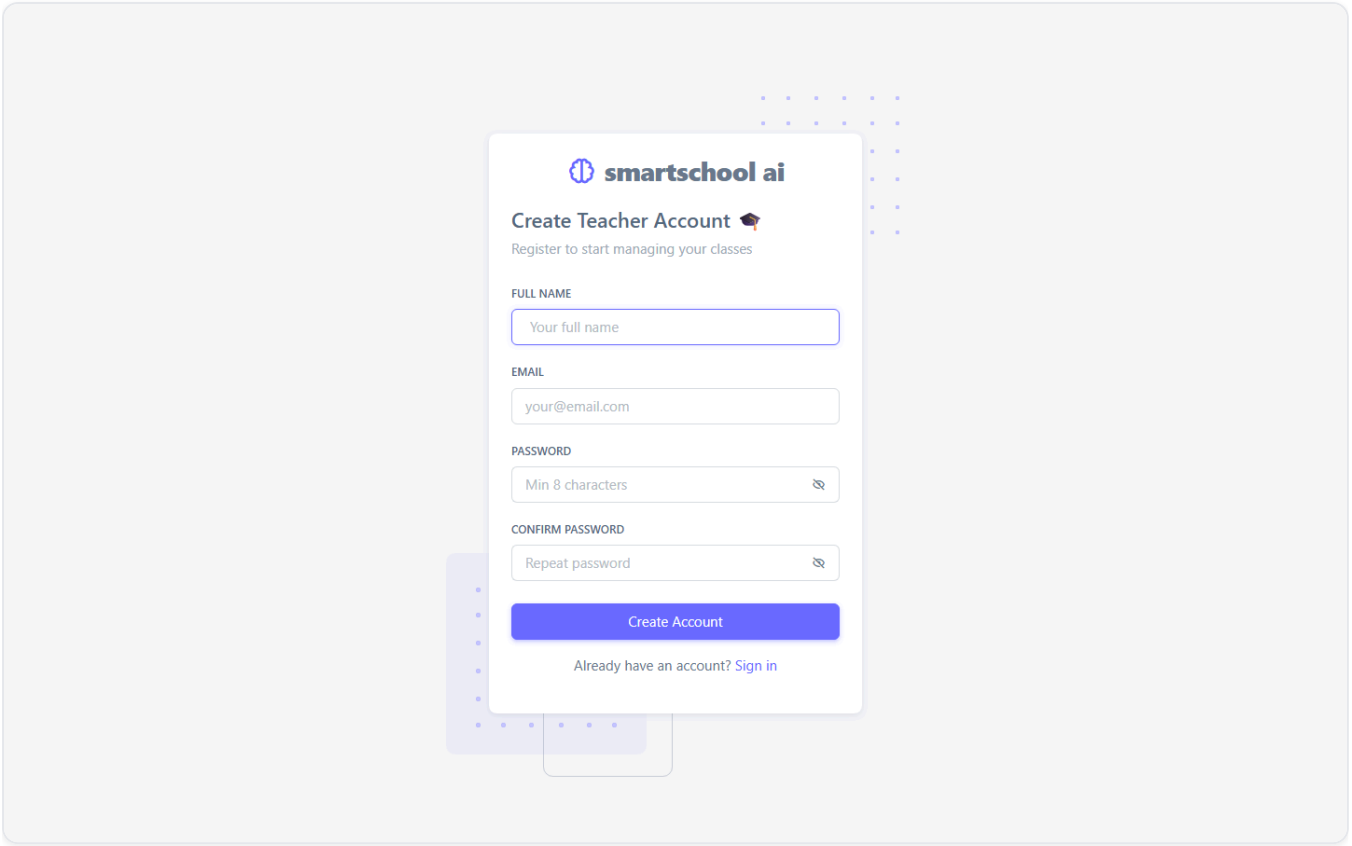

1 Sign-in screen

Go to your school's SmartSchool AI address. If you already have an account, enter your email and password here and click **Sign in**. New teachers and students use the links below the form instead.

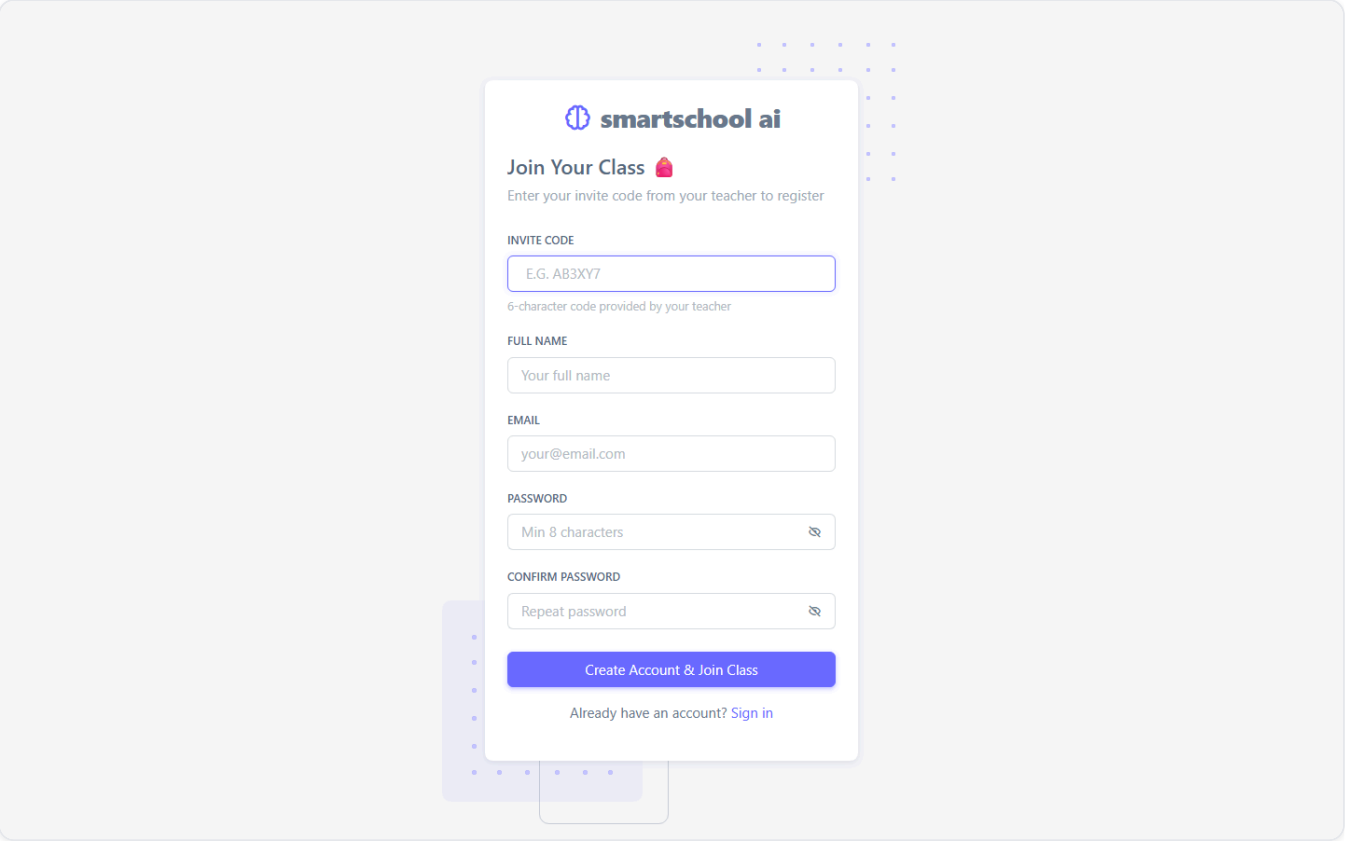

2 Creating a teacher account

Click **Create teacher account** on the sign-in screen. Fill in your name, email, and a password (minimum 8 characters), then submit. You'll be redirected back to the sign-in screen to log in with your new credentials.

3 Joining as a student

Students don't self-register freely — you need a 6-character **invite code** from your teacher first (see "Creating a Class" below for where teachers find it). Click **Join with invite code** on the sign-in screen, enter the code along with your name, email and password, and submit — you're automatically enrolled in your teacher's class.

> Tip: invite codes are not case-sensitive and are always 6 characters.

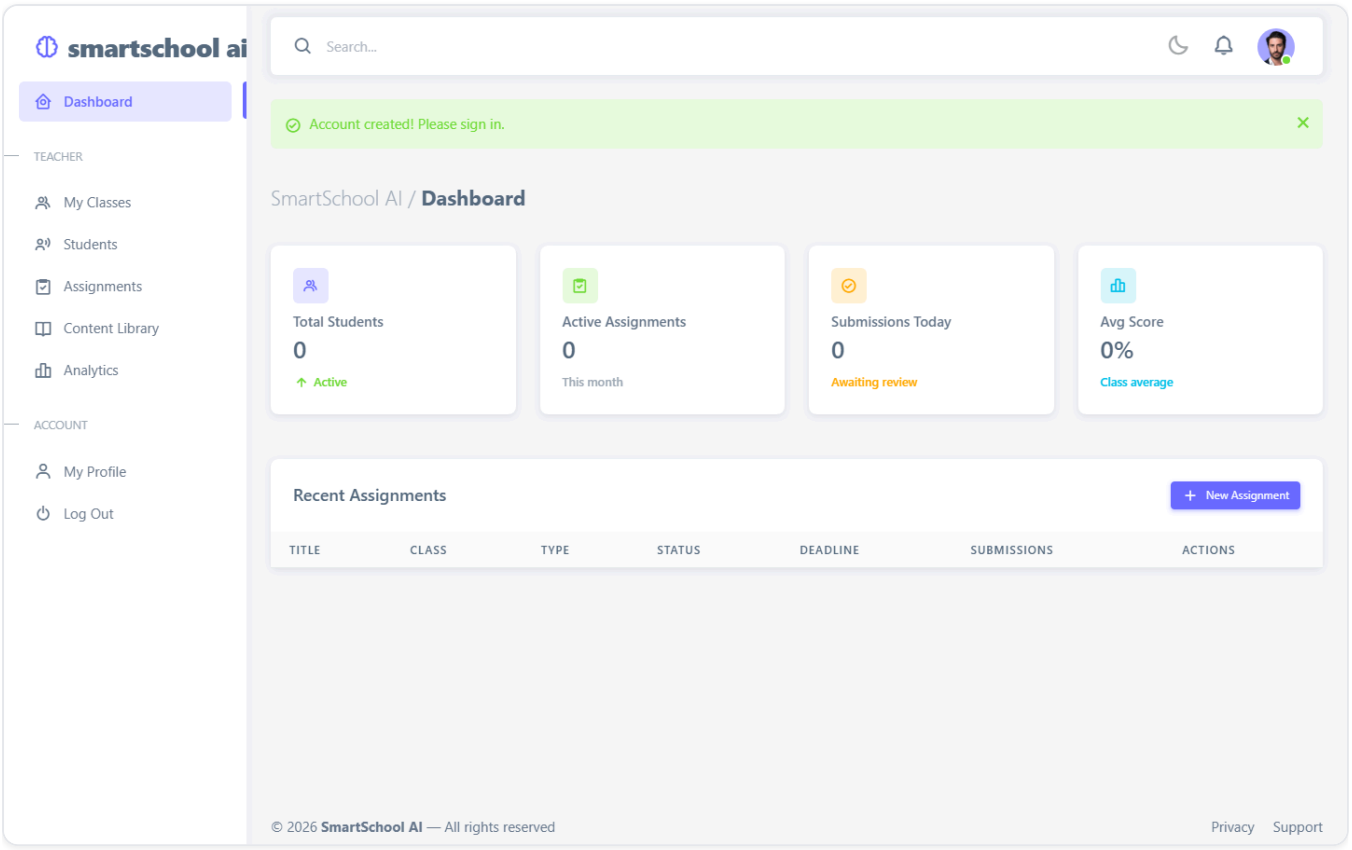

FOR TEACHERS

Running Your Classroom

Everything a teacher needs — classes, assignments, grading and analytics — lives under the sidebar on the left once you're signed in.

1 Your dashboard

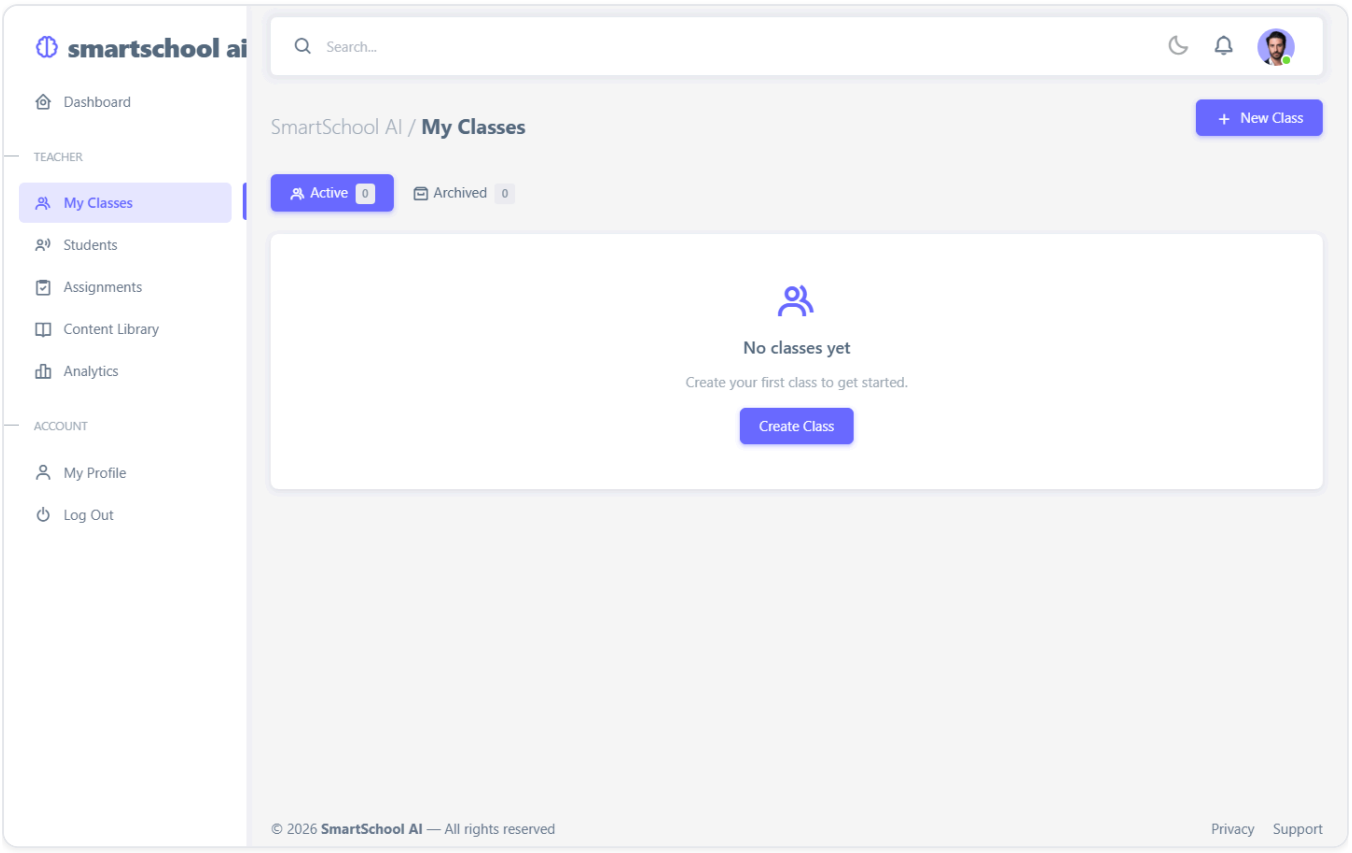

After signing in you land on your **Dashboard**: a quick summary of your students, active assignments, submissions awaiting review, and your class average score, plus a shortcut to create a new assignment.

Creating a Class

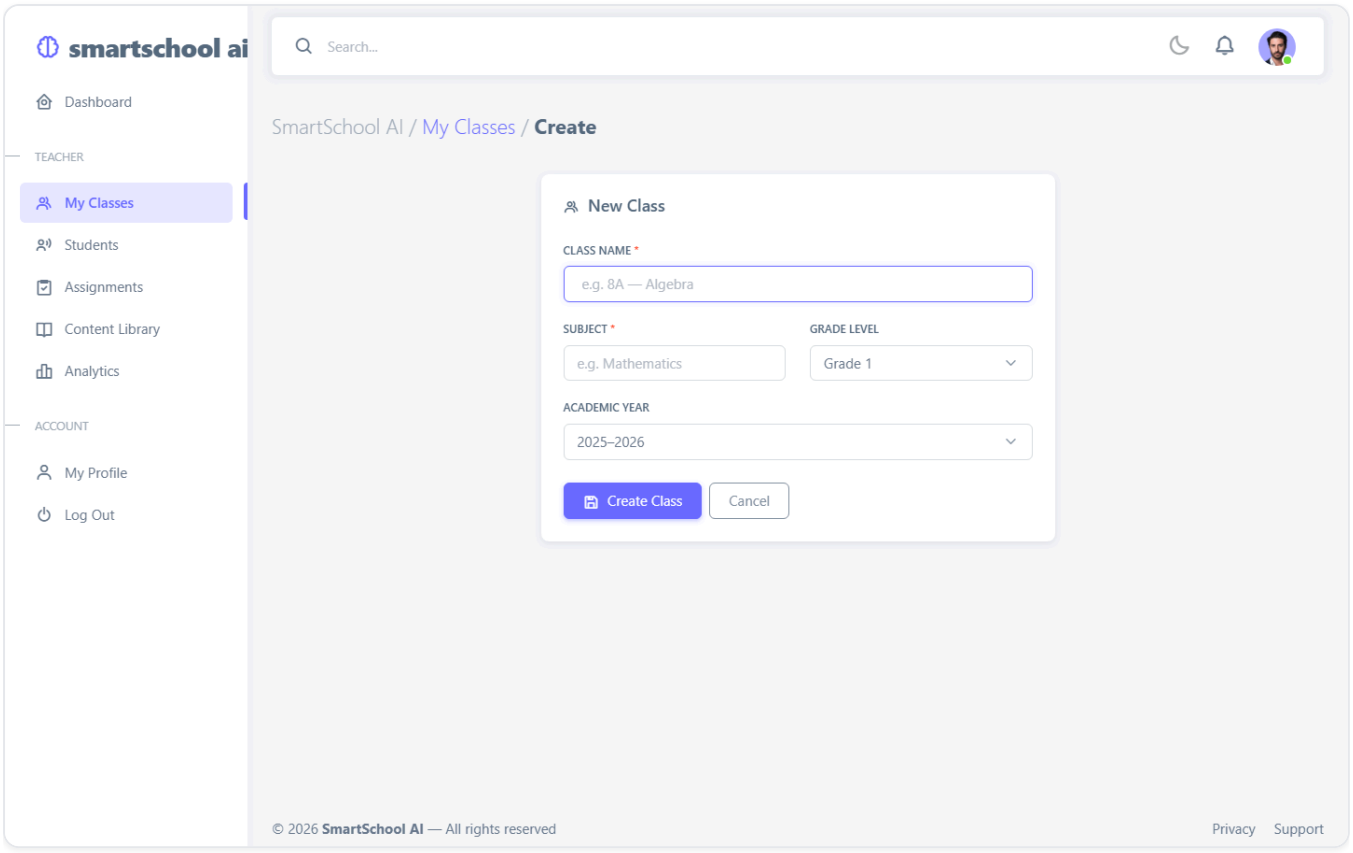

1 My Classes — empty state

Open **My Classes** from the sidebar. The first time, you'll see an empty list with a prompt to create your first class.

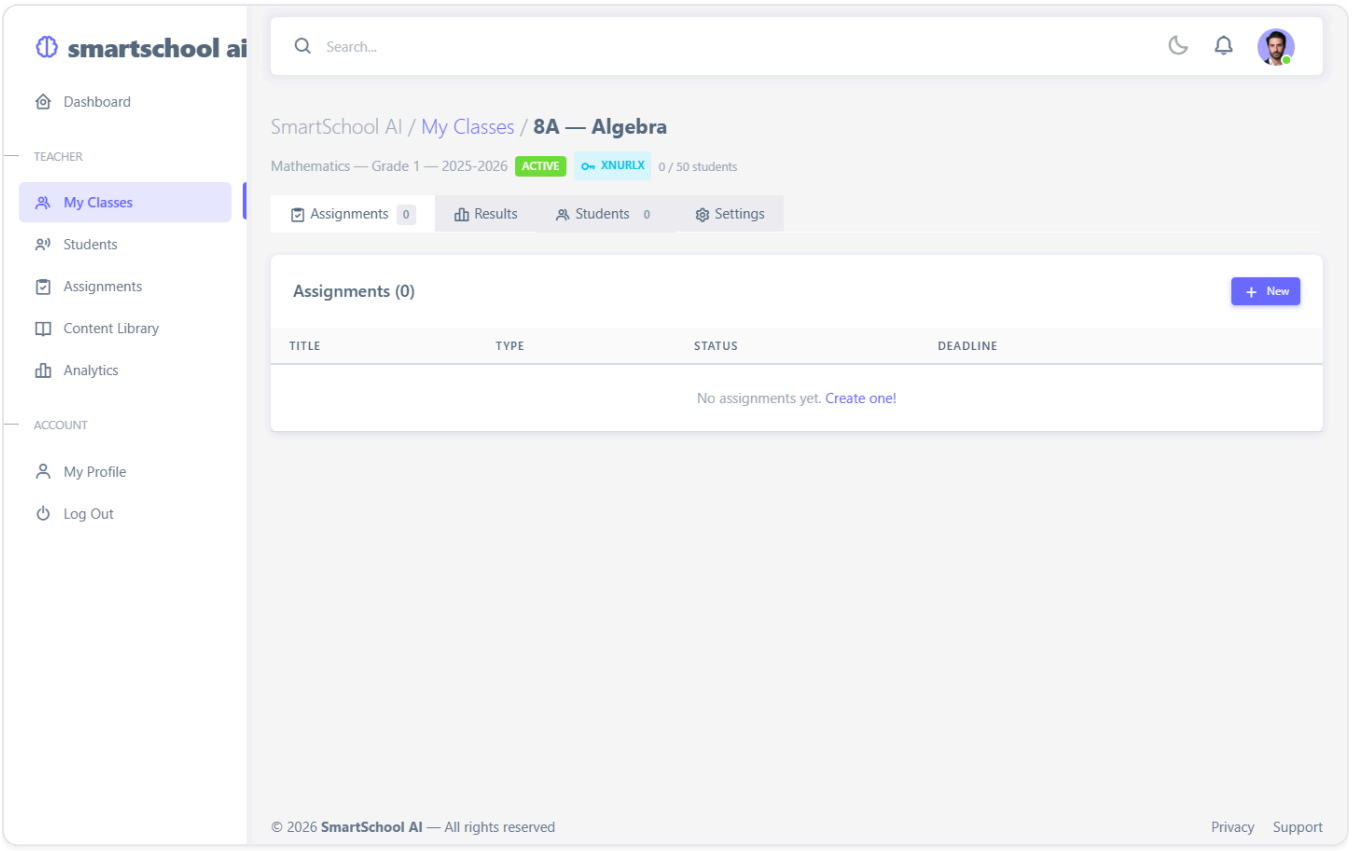

2 Fill in the class details

Give the class a name, subject and grade level, and pick an academic year, then click **Create Class**.

3 Share the invite code

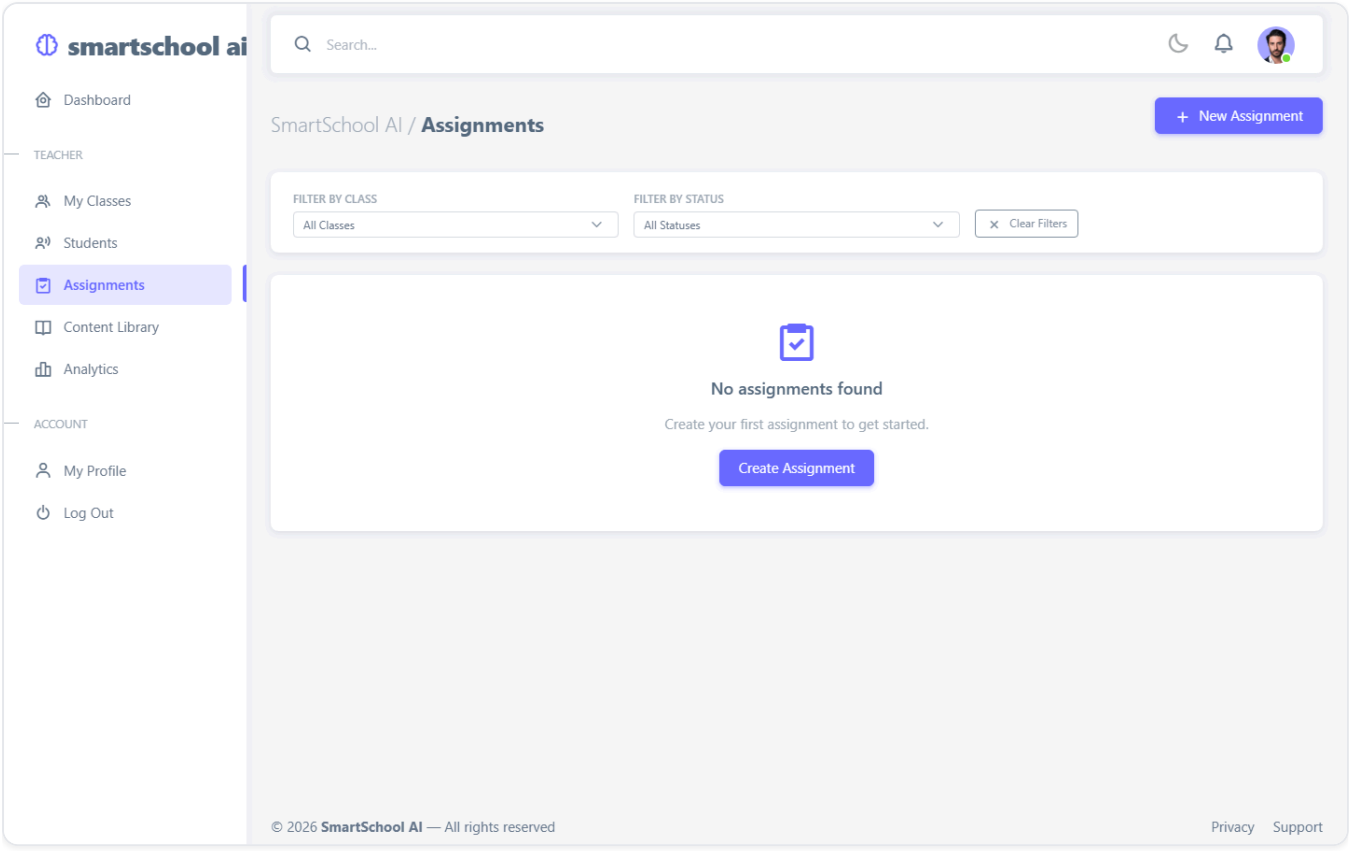

Your new class page shows a unique **invite code** (the badge with the key icon next to the class name) — share this with your students so they can join via **Join with invite code** on the sign-in screen. The tabs below let you manage assignments, results, enrolled students and class settings.

Creating an Assignment

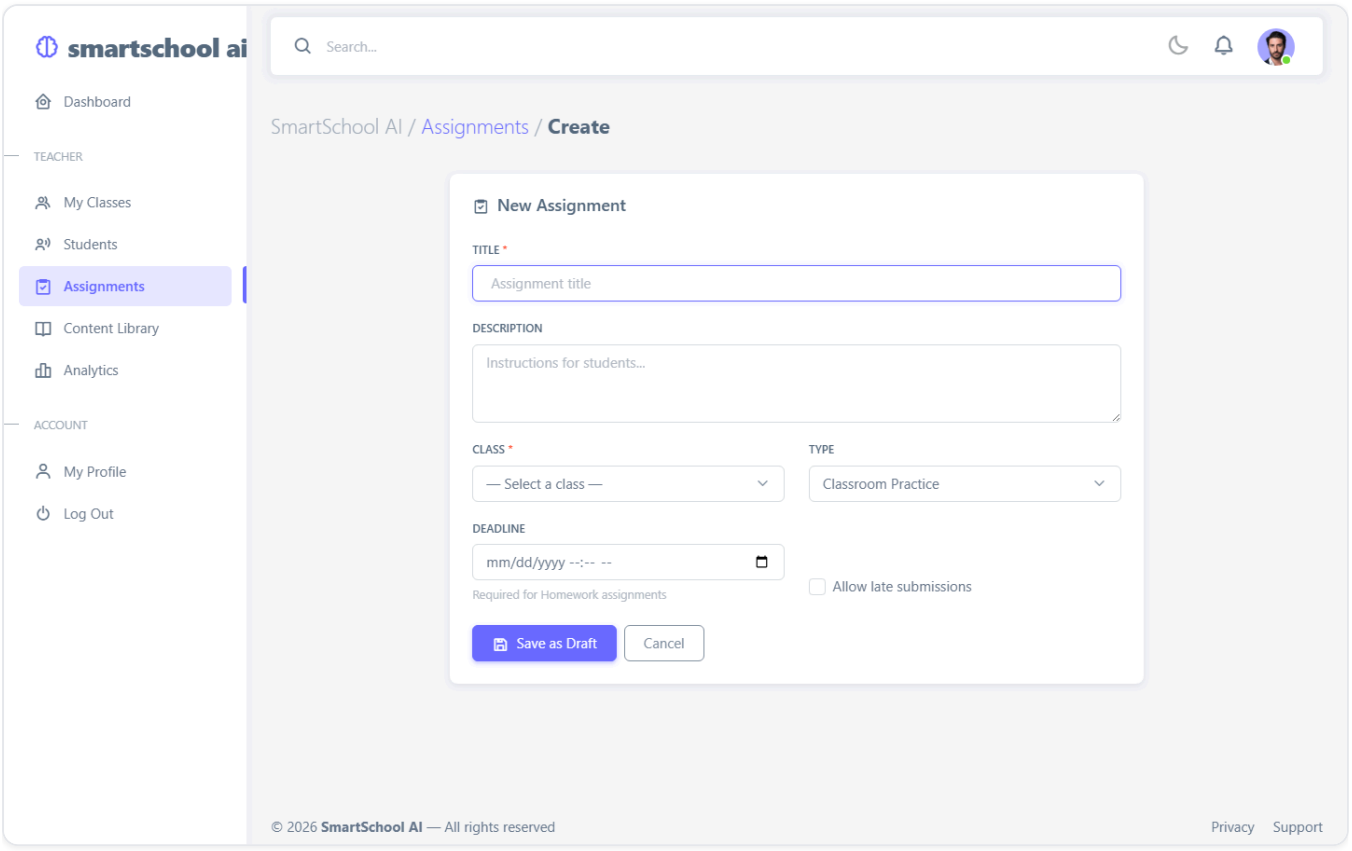

1 Assignments — empty state

Open **Assignments** from the sidebar to see every assignment across all your classes. Click **New Assignment** to start one.

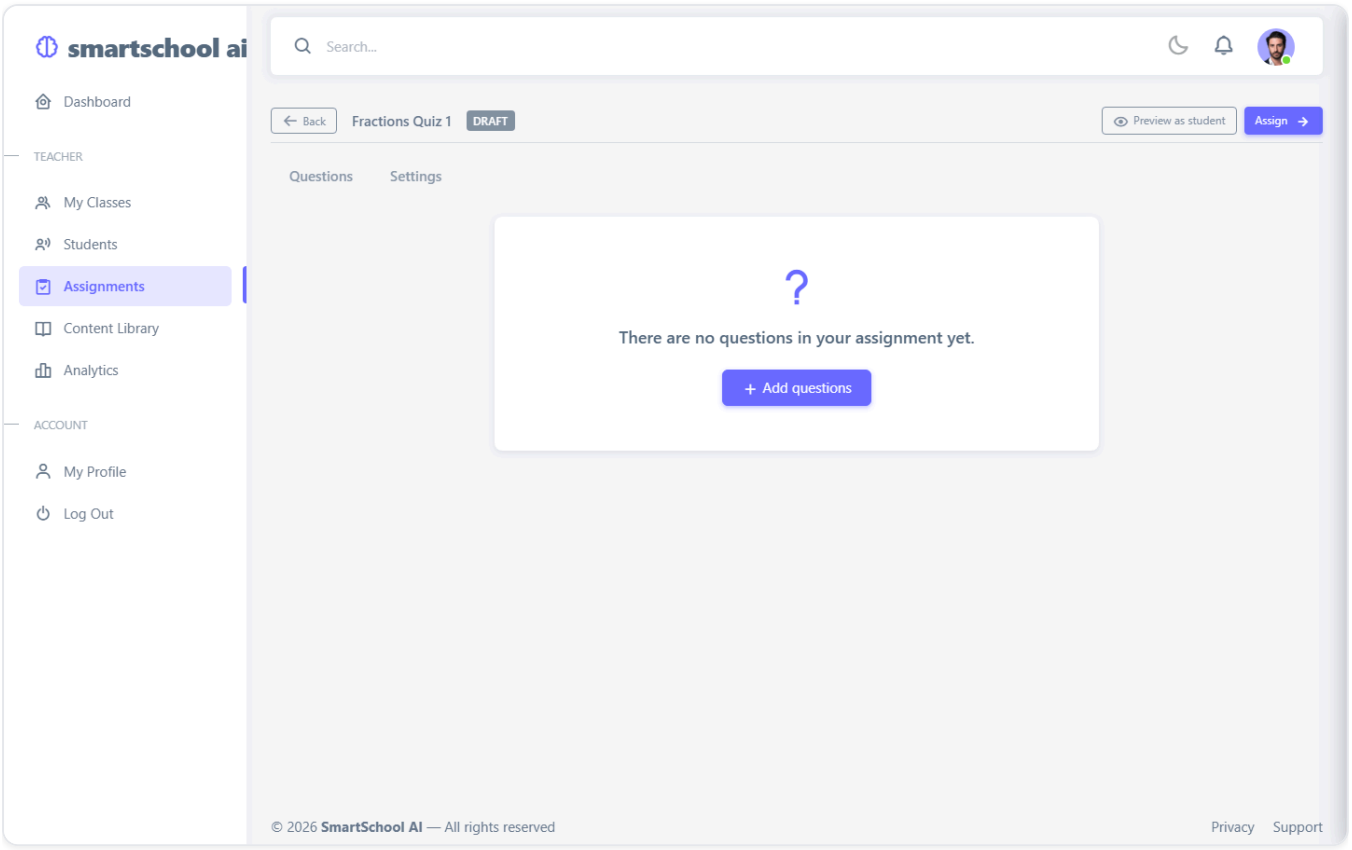

2 Basic details

Give the assignment a title and choose which class it belongs to. **Classroom Practice** assignments have no deadline and give students instant feedback; **Homework** assignments require a deadline. This is saved as a draft — it won't be visible to students yet.

3 The assignment editor

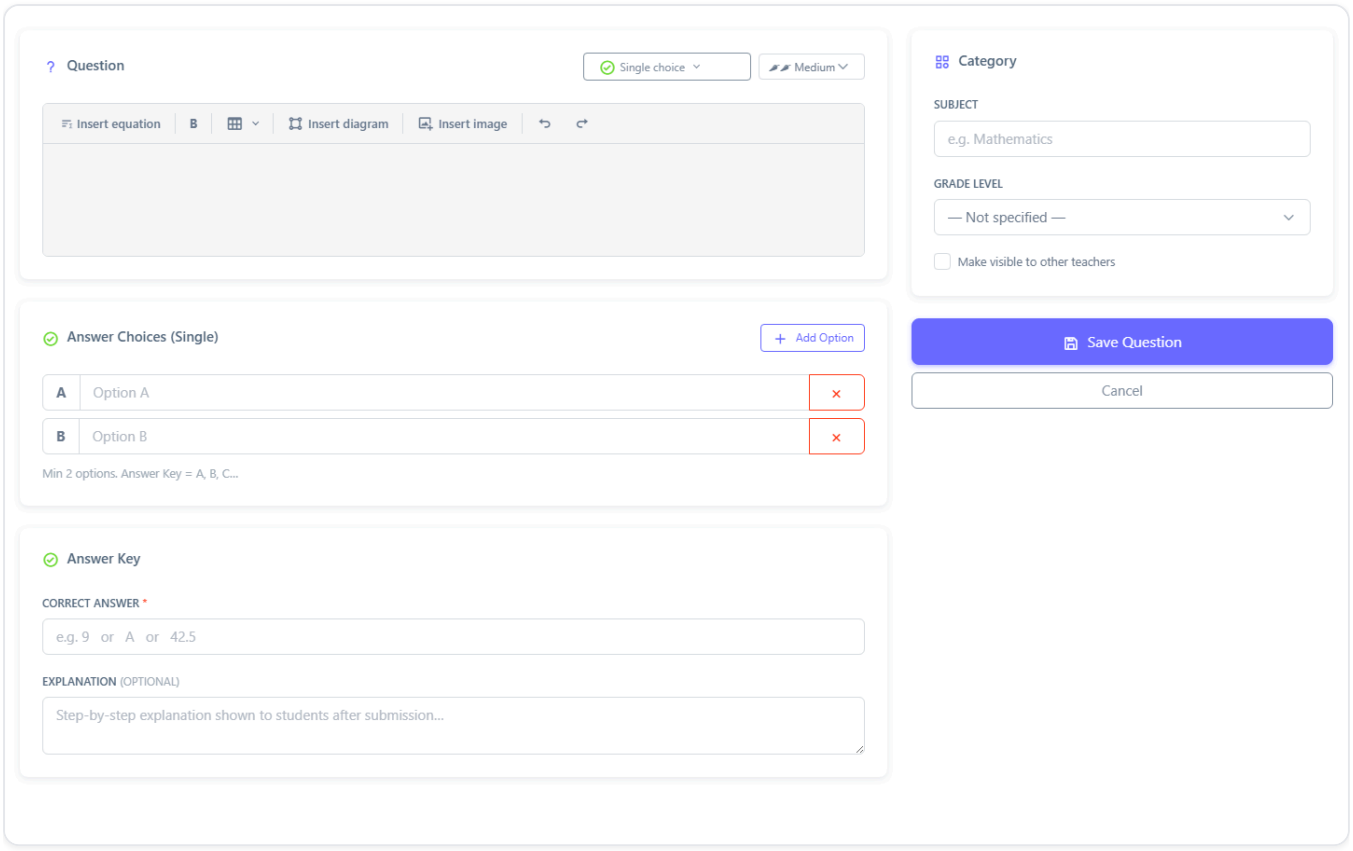

You land in the assignment editor with an empty question list. From here you can add questions, then switch to the **Settings** tab to adjust the deadline, attempt limits and other rules before assigning it to students.

Adding Questions

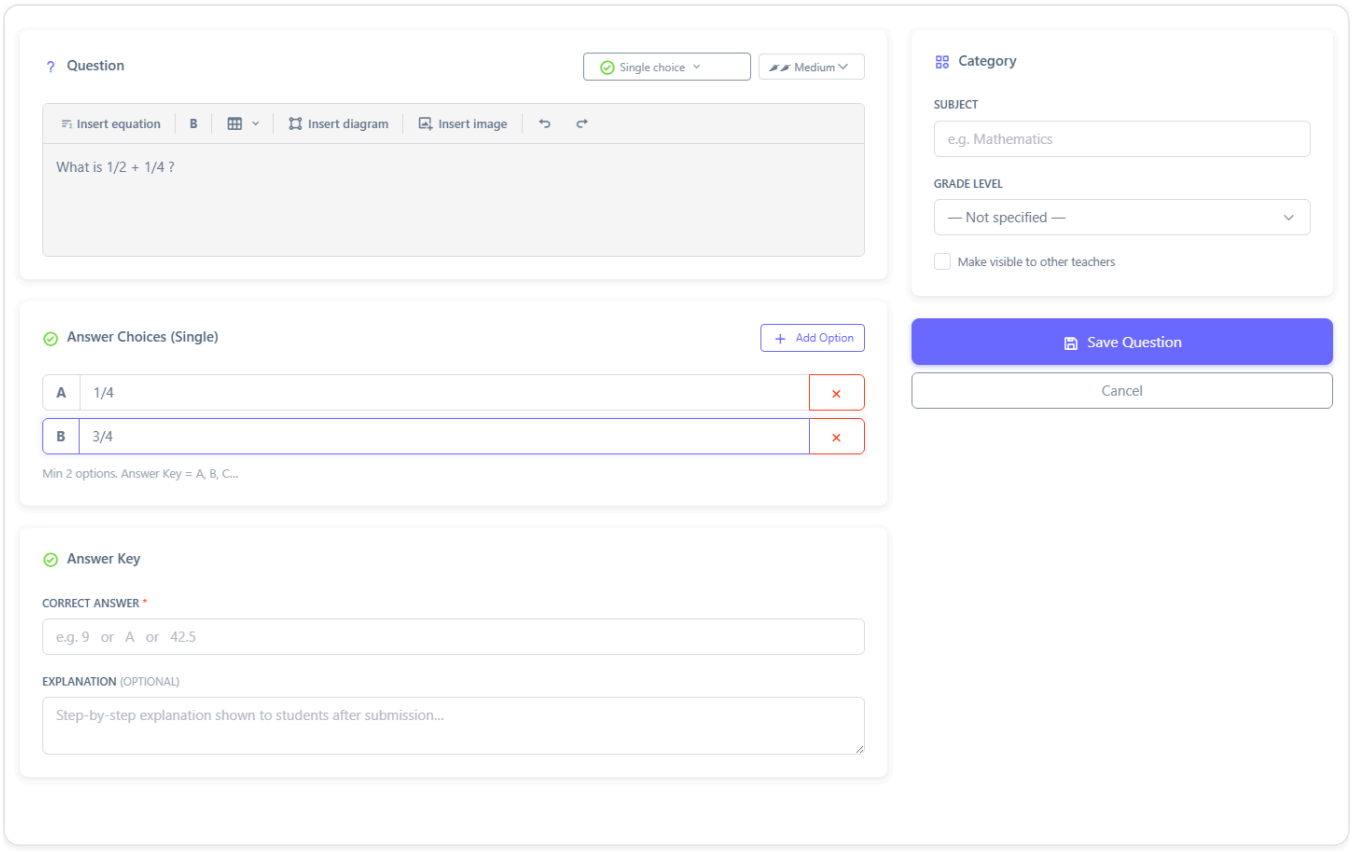

1 Click "Add questions"

You can write a question manually, generate one with AI, import from a PDF, or reuse one from your library. Here we're writing one manually: pick a question type from the dropdown (Text/Numeric, Single choice, Multiple choice, Graphing, and more) and set the difficulty.

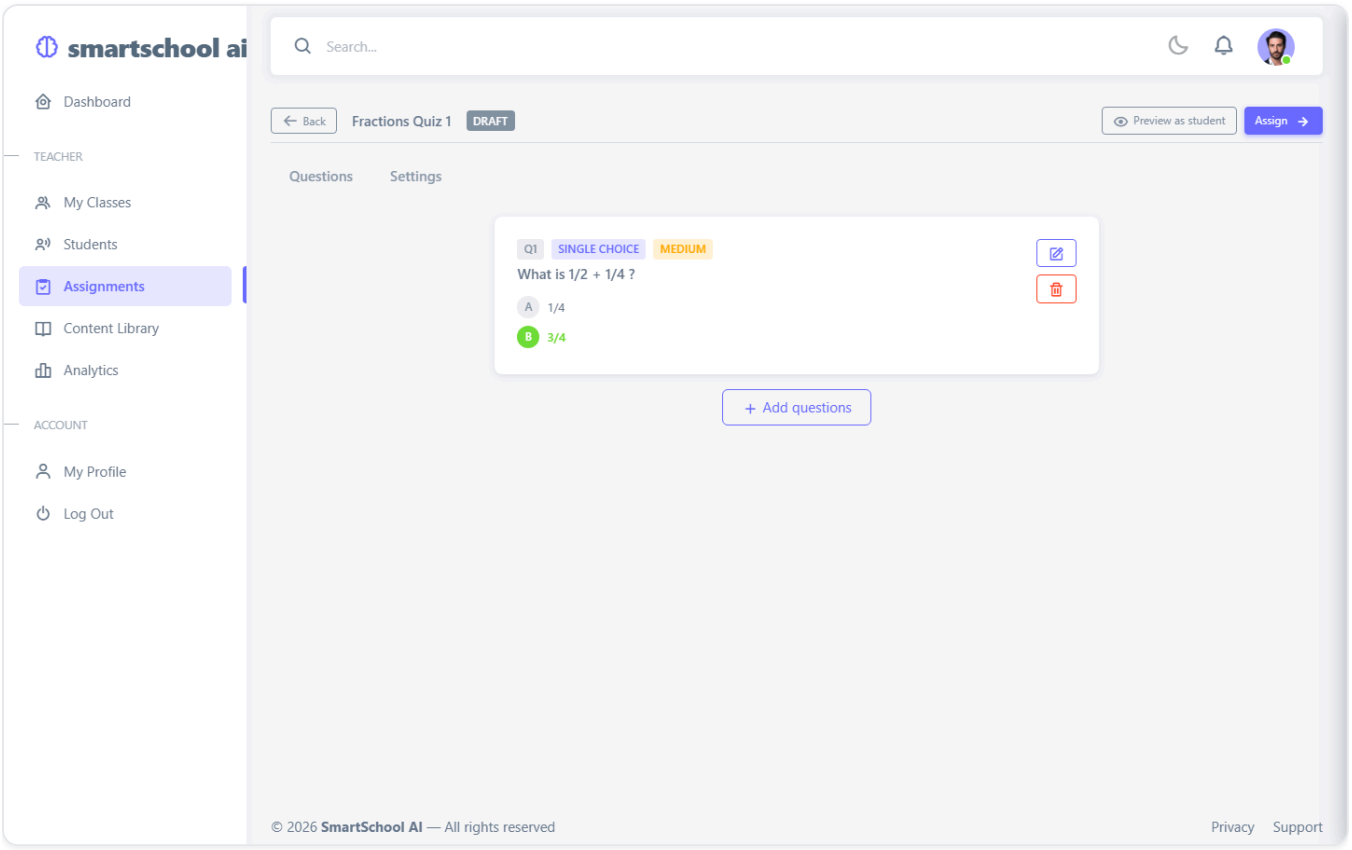

2 Fill in the question, options and answer key

Type the question text in the editor (you can insert equations, tables, diagrams or images using the toolbar). For choice questions, fill in each option — the **Answer Key** uses the option letter (A, B, C…) for choice questions, or the expected value for text/numeric ones. Click **Save Question** when done.

3 Question added

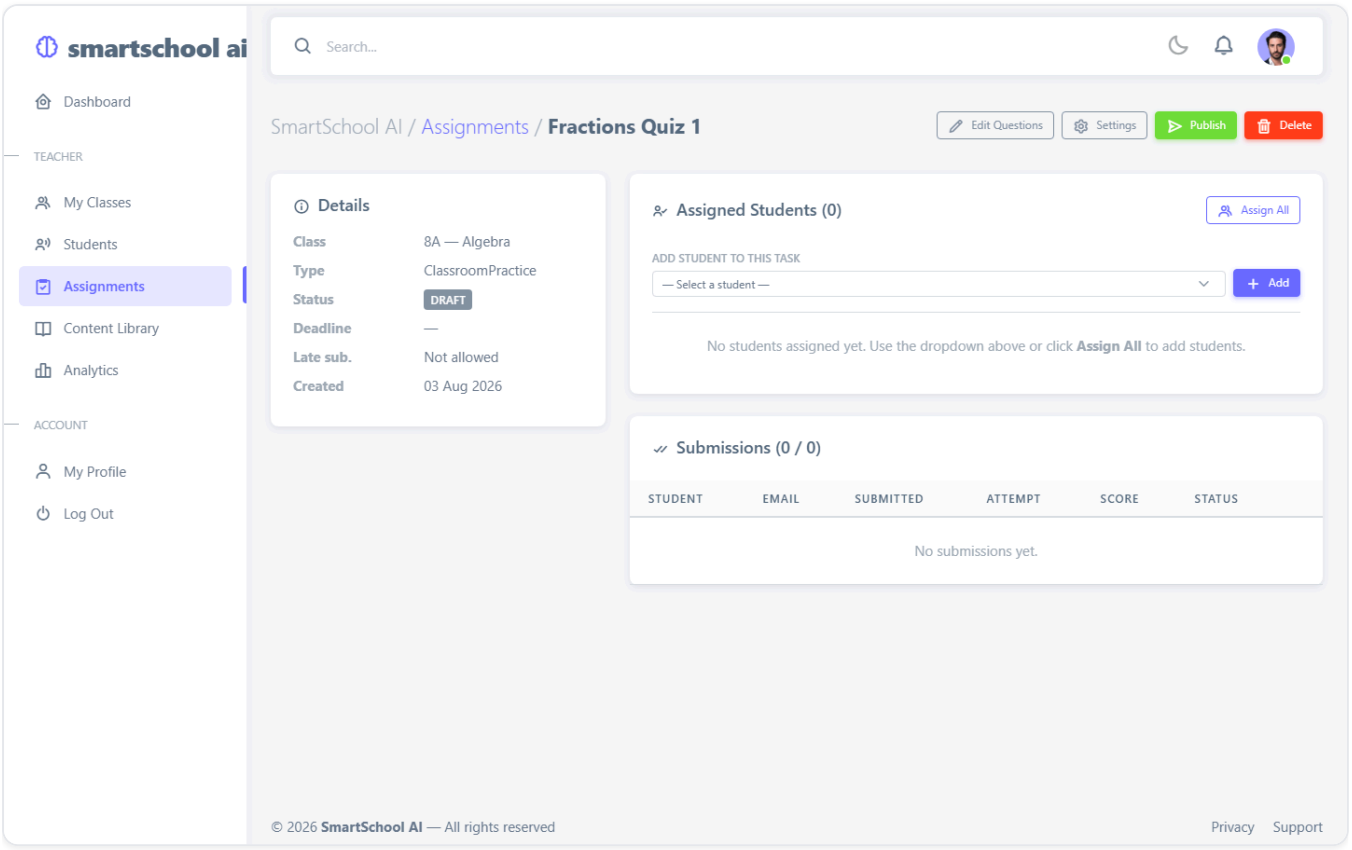

The question now appears in the assignment. The correct option is highlighted in green for your reference (students never see this). You can edit or remove it, or add more questions the same way.

Assigning & Publishing

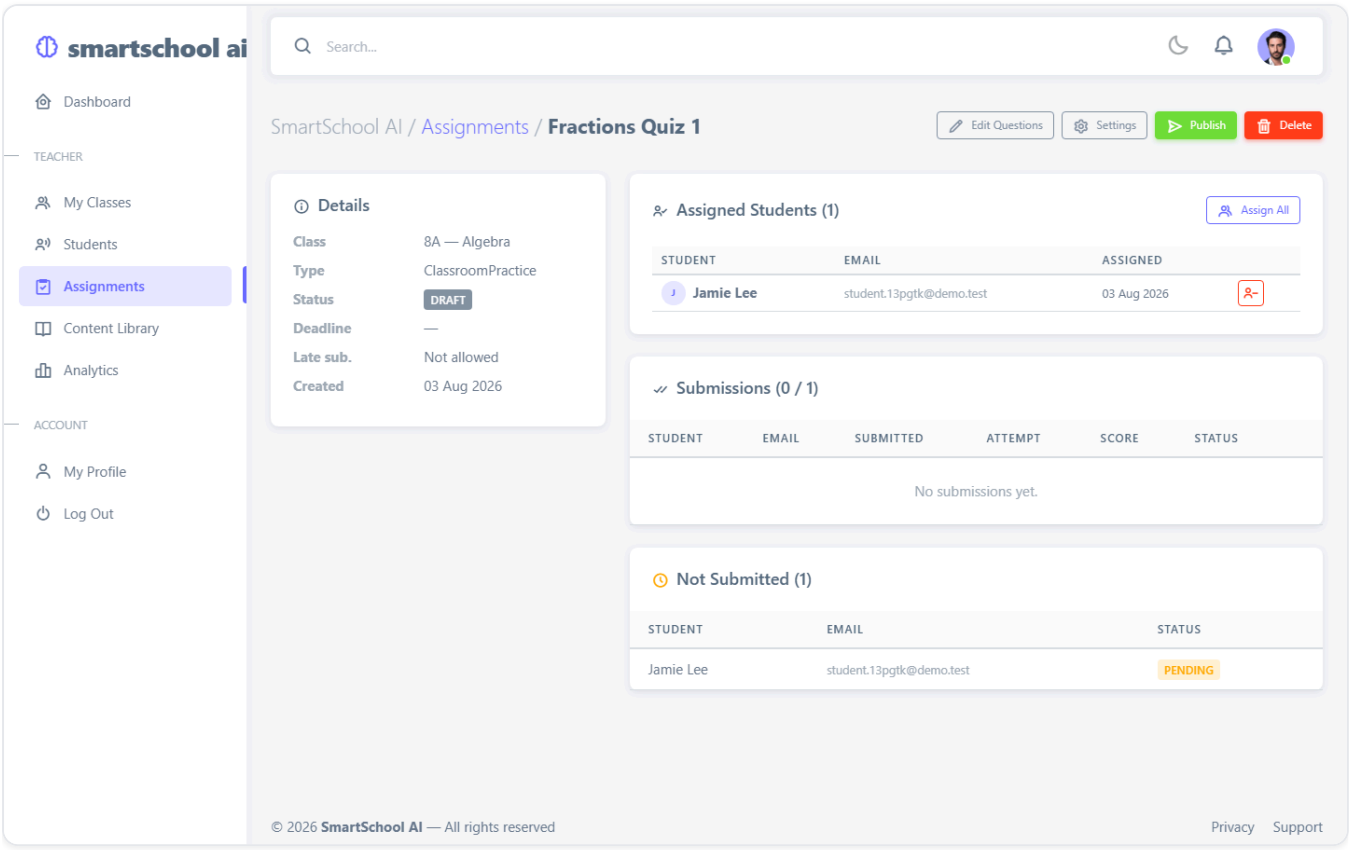

1 Assignment details page

Open the assignment from the list to see its details page — class, type, deadline, and who it's assigned to. While it's still a **Draft**, nothing is visible to students yet.

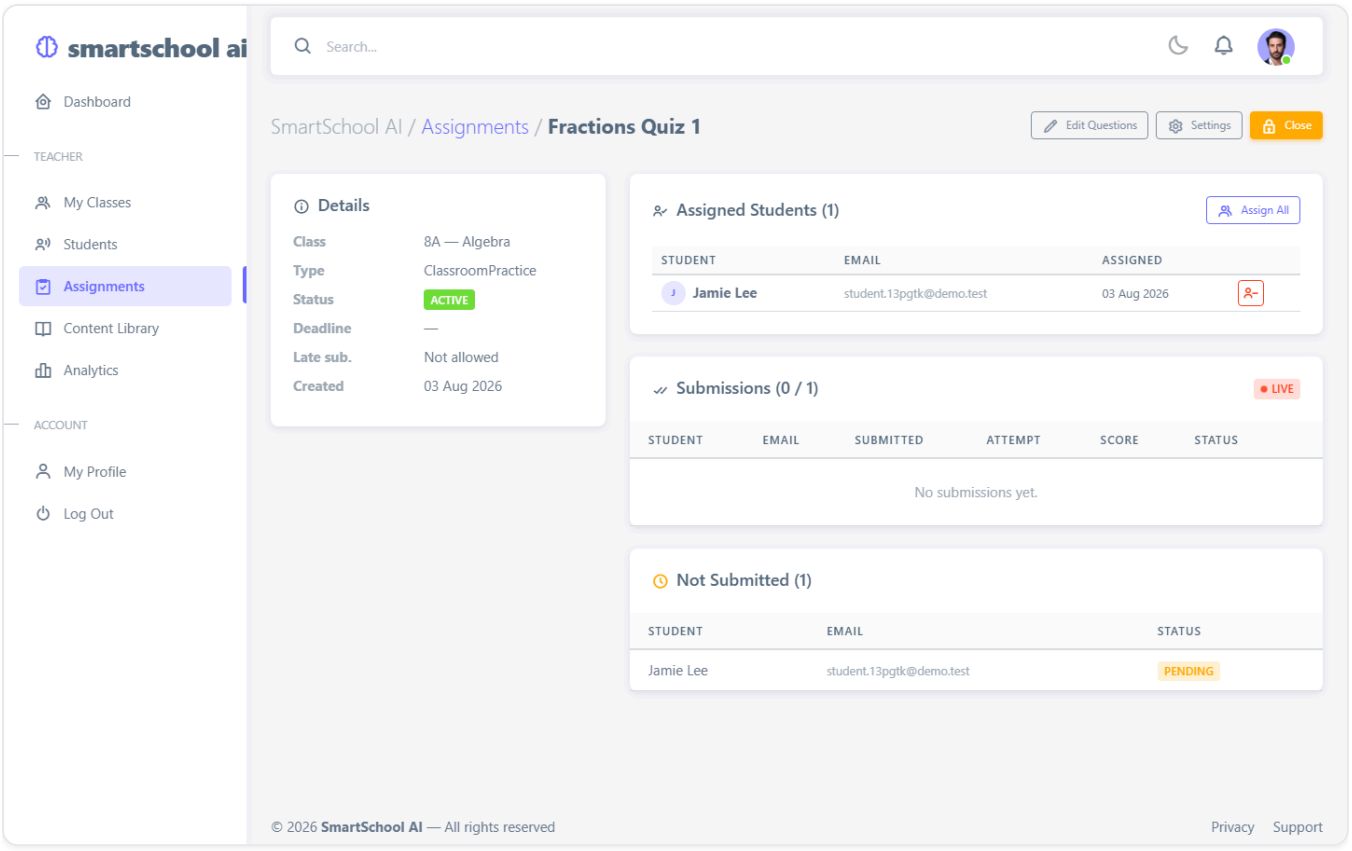

2 Assign students

Click **Assign All** to assign every currently enrolled student in the class, or assign individuals one at a time. The "Assigned Students" panel updates immediately.

3 Publish

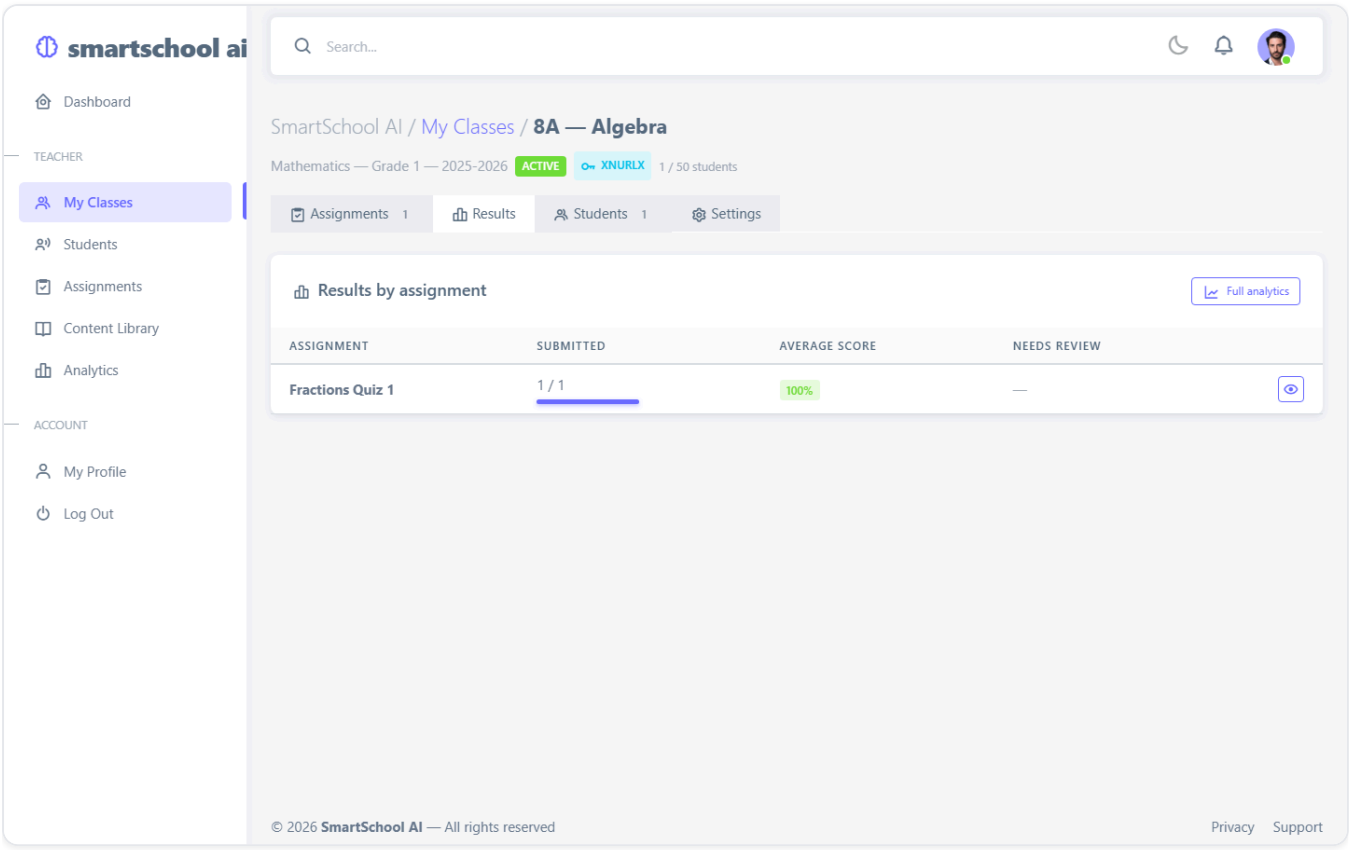

Click **Publish** to make the assignment go live — its status changes to **Active** and assigned students can now see and start it. You can still edit questions until a student submits an answer; after that, the question set is locked to keep already-graded answers aligned.

Reviewing Submissions & Grades

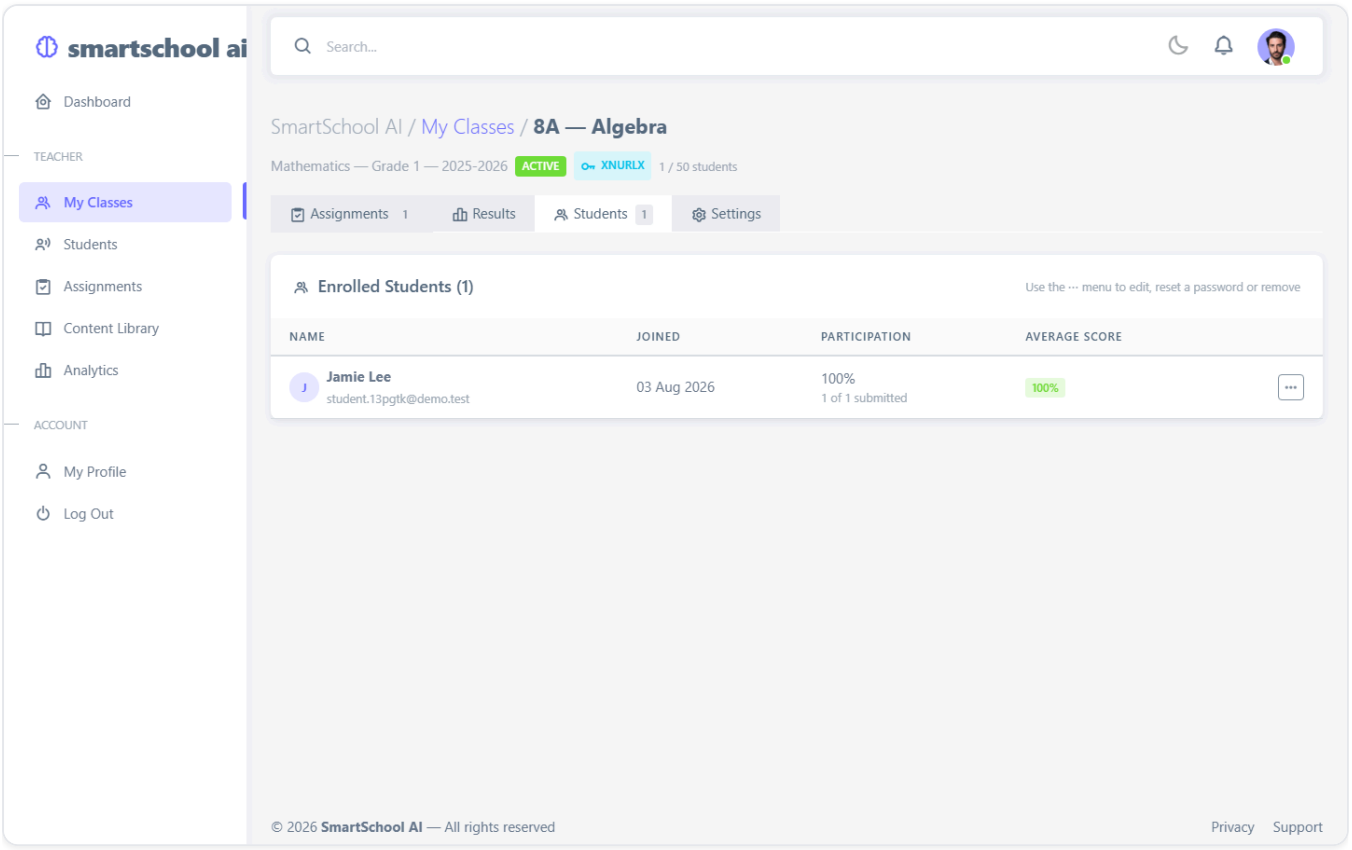

1 Results by assignment

On the class page, the **Results** tab shows submission progress and the average score for every published assignment at a glance.

2 Per-student progress

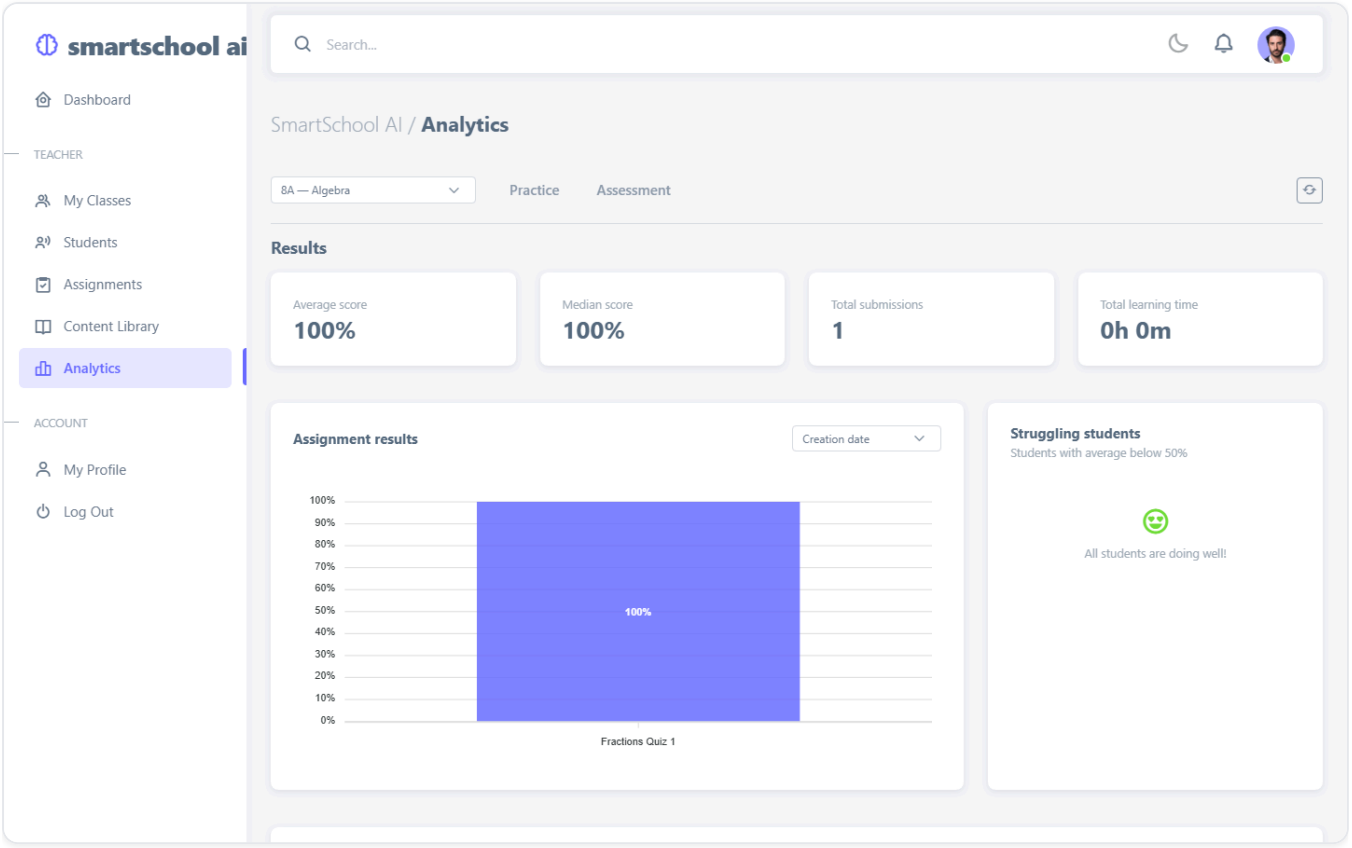

The **Students** tab lists everyone enrolled, when they joined, their participation rate and average score. Use the ⋯ menu on a row to edit a student, reset their password, or remove them from the class.

Class Analytics

1 Analytics dashboard

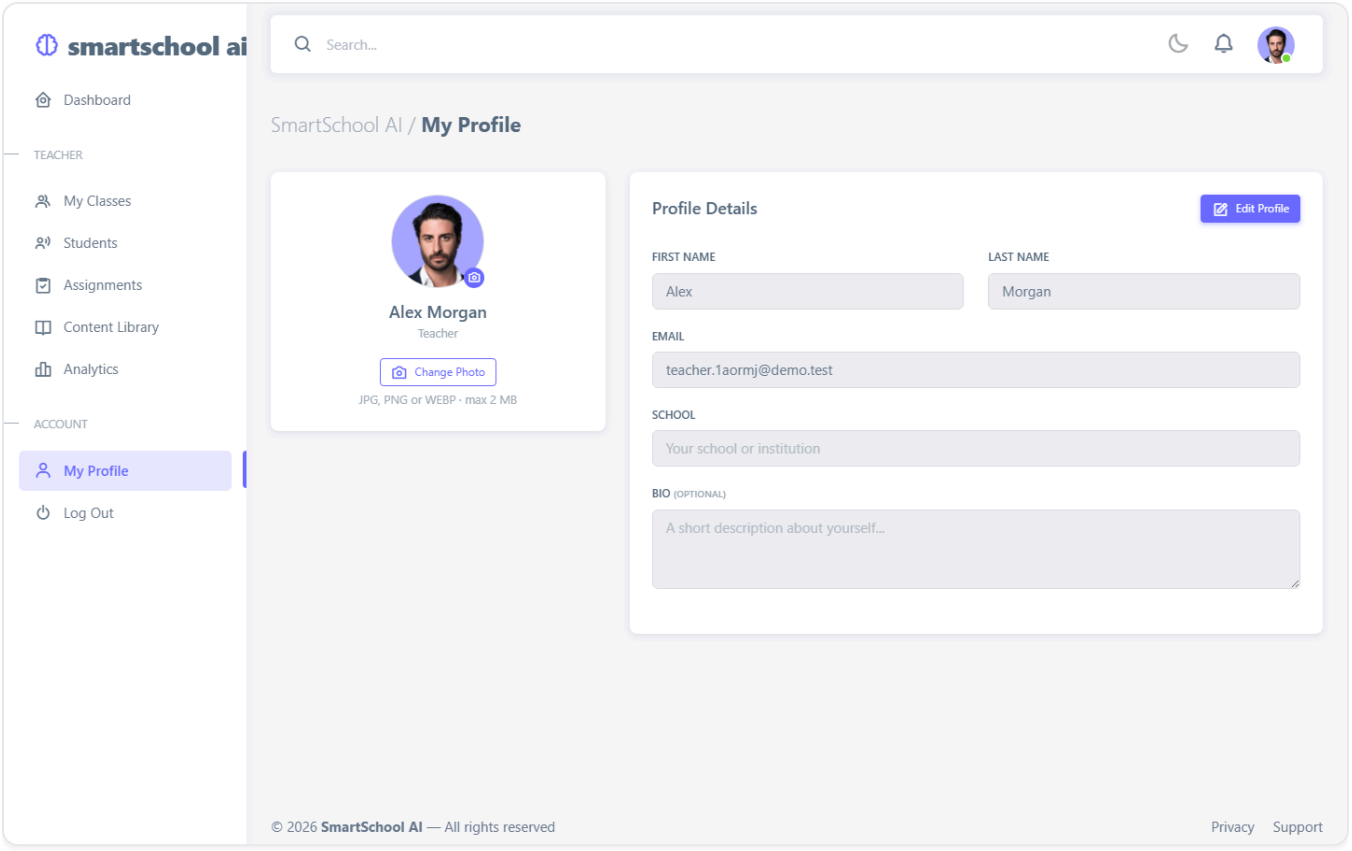

The **Analytics** page gives a deeper view: average/median score, total submissions, total learning time, a per-assignment results chart, and a "Struggling students" panel that flags anyone averaging below 50% so you can step in early.

Your Profile

1 My Profile

Update your name, school, bio, and profile photo from **My Profile** in the sidebar.

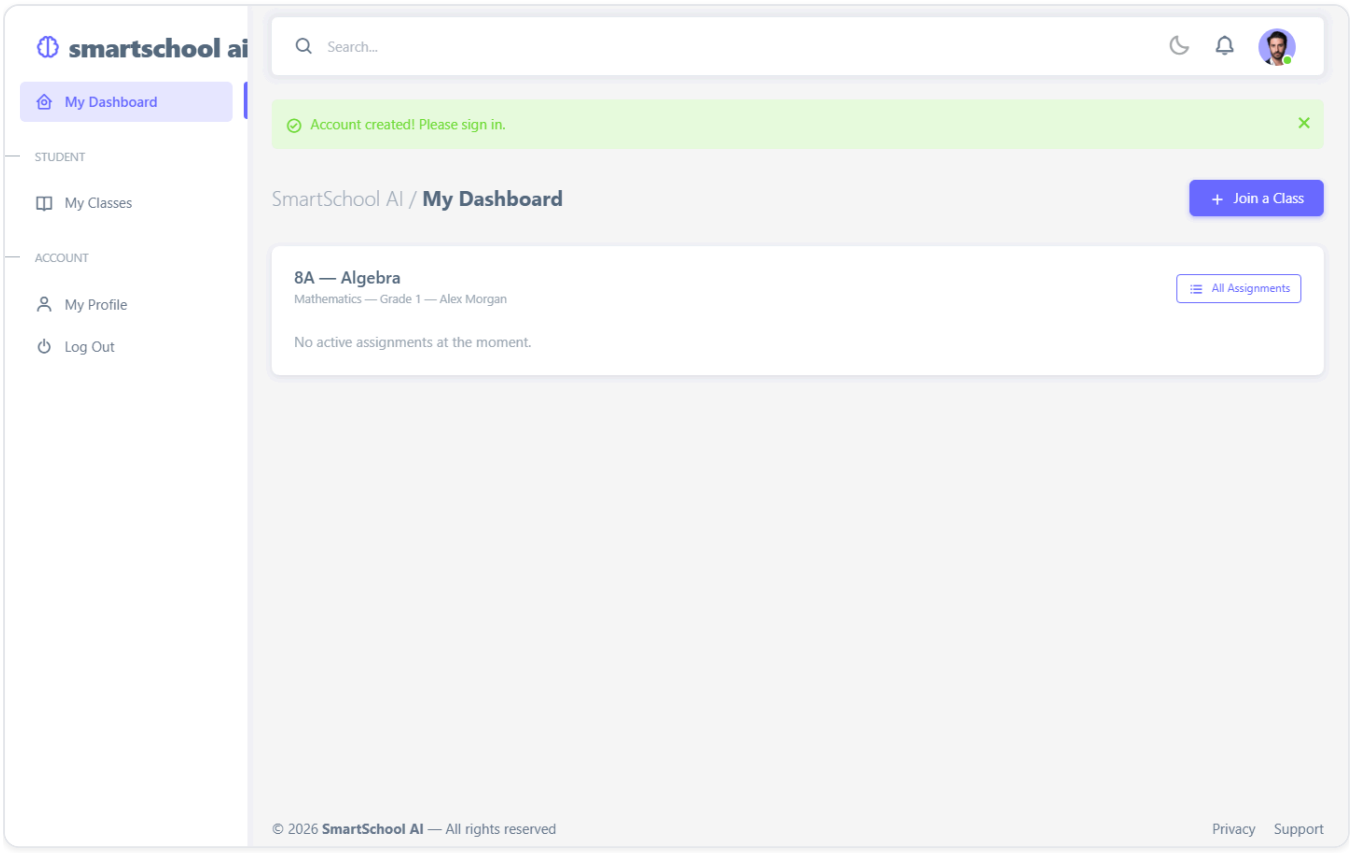

FOR STUDENTS

Completing Your Work

Once you've joined your teacher's class with an invite code, everything you need — assigned work and your results — is in one place.

1 Your dashboard

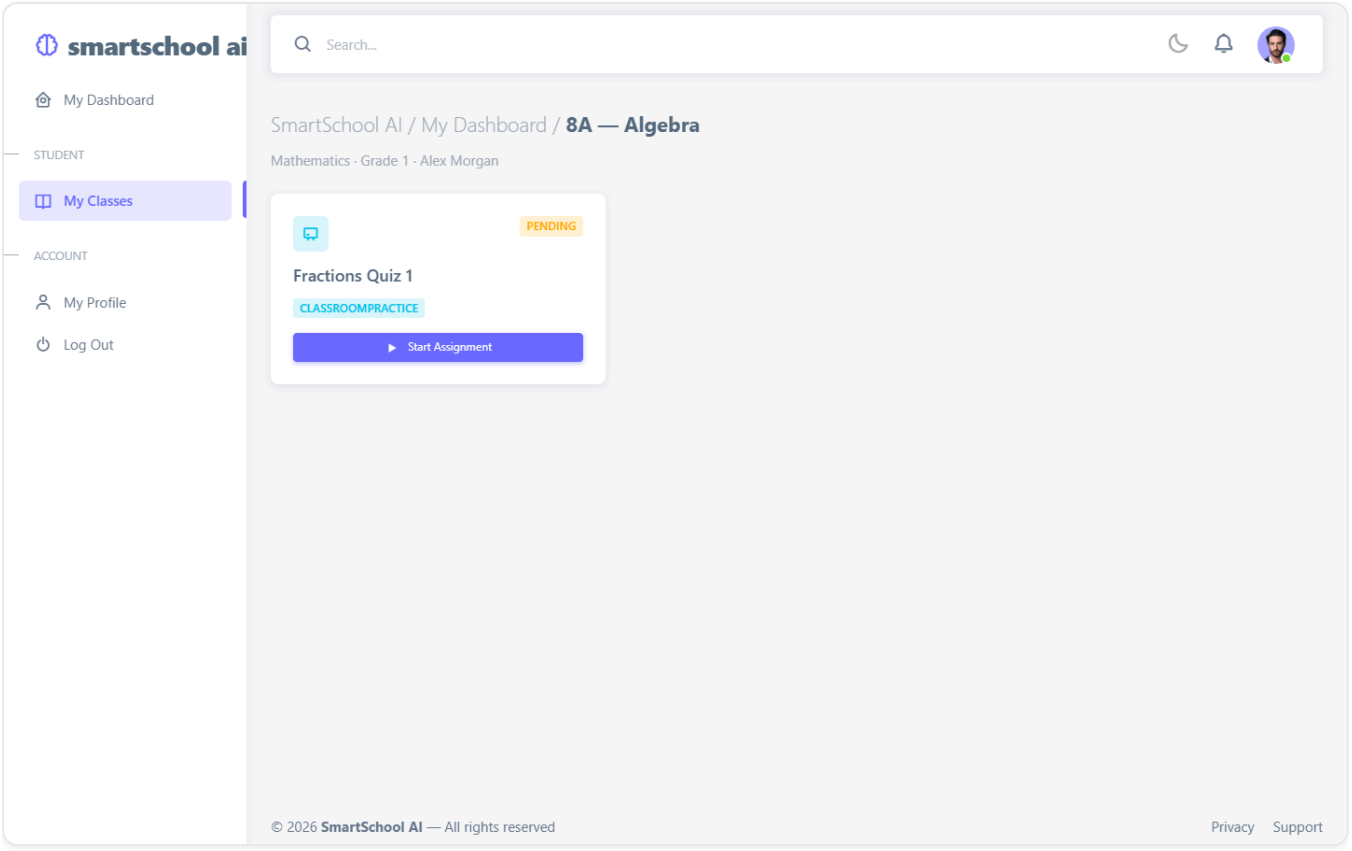

After signing in, your dashboard shows the classes you've joined. Click into a class to see what's been assigned to you.

Your Assignments

1 Assignment list for a class

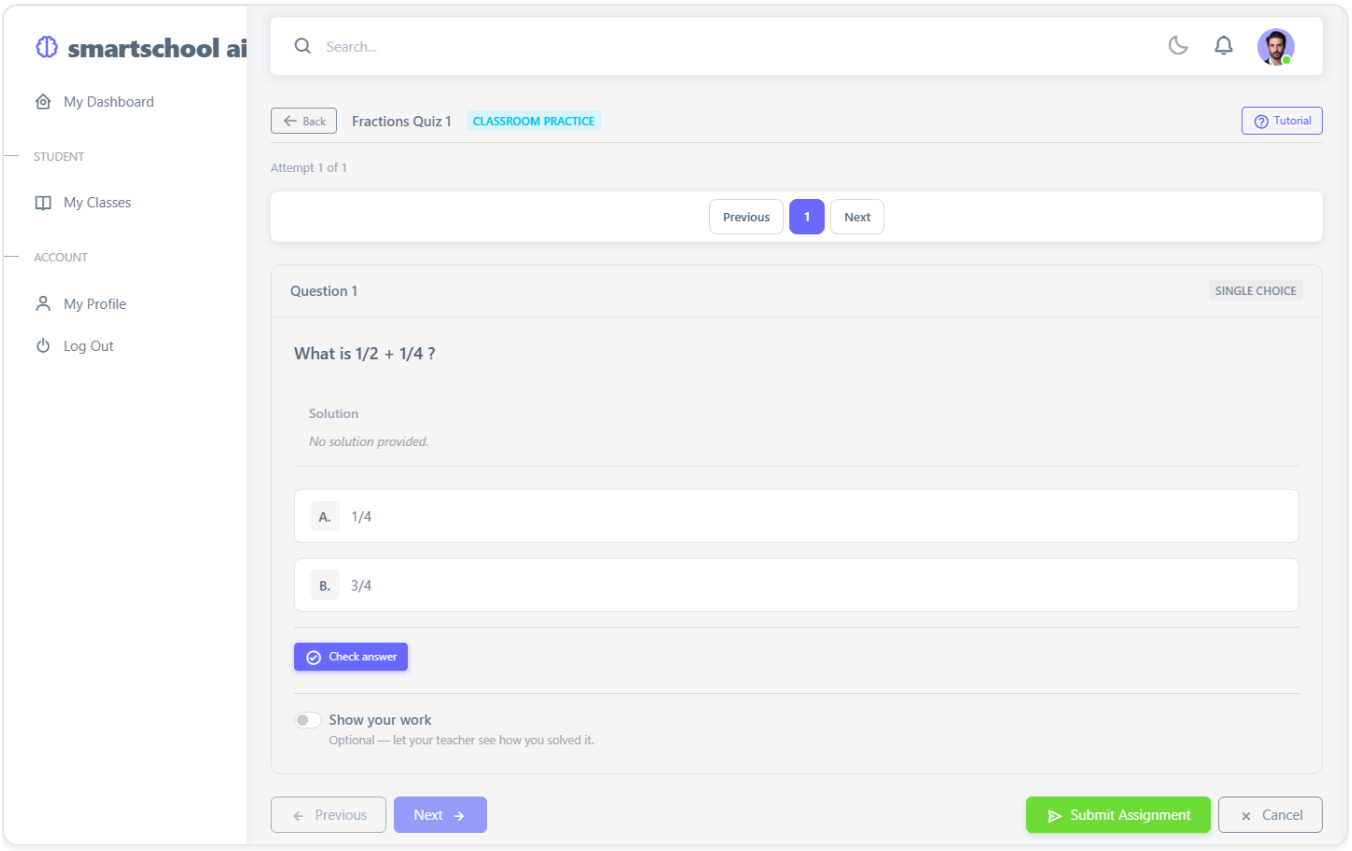

Open a class to see every assignment that's been published to you, along with its status. Click one to start working on it.

Taking an Assignment

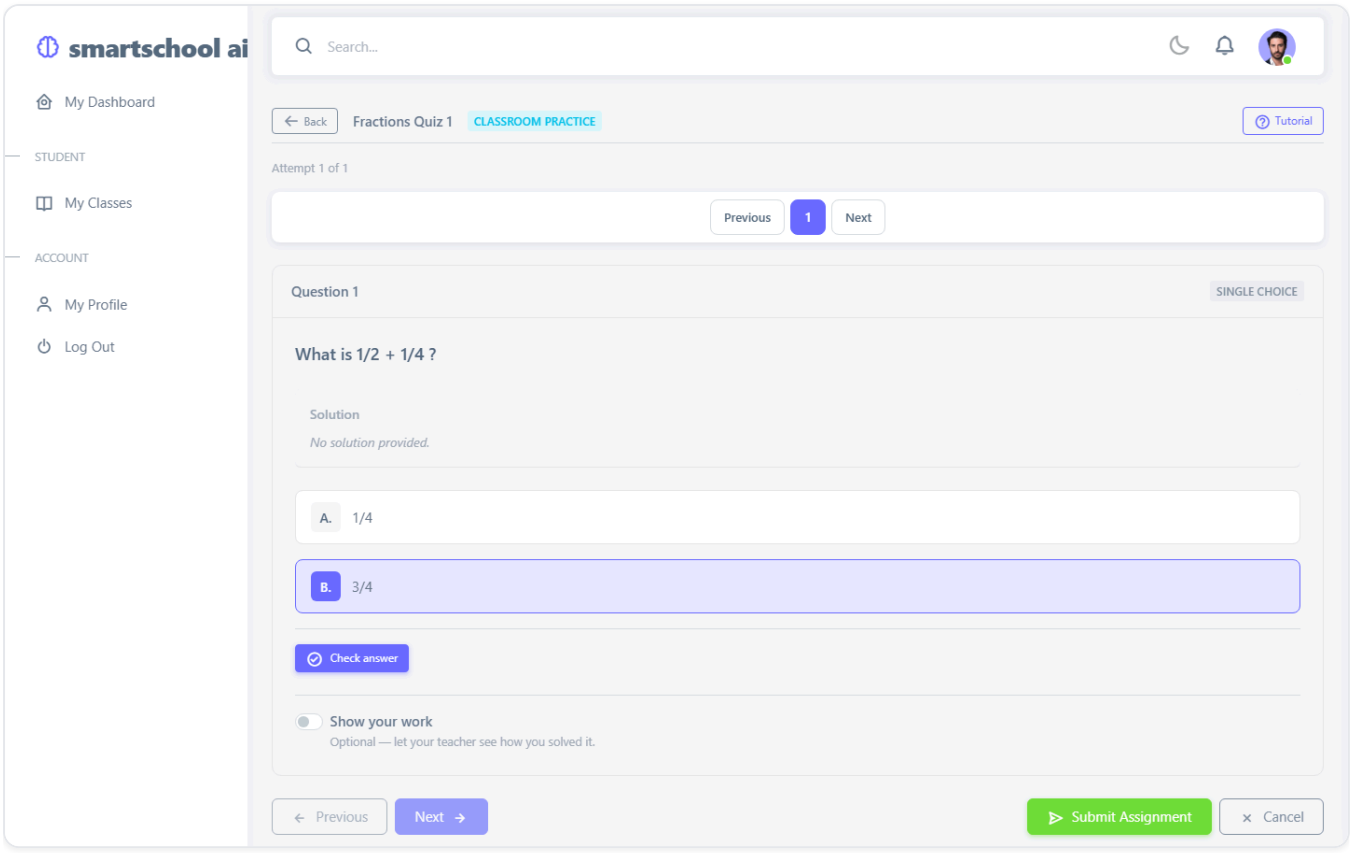

1 Answer each question

Work through the questions using the **Previous** / **Next** buttons or the numbered pager. For choice questions, click the option you believe is correct — it highlights to confirm your selection. You can optionally show your working (typed or a photo) below each question.

2 Selected answer

Your chosen option stays highlighted so you always know what you've picked before moving on or submitting.

3 Submit

When you're done, click **Submit Assignment**. A confirmation dialog reminds you this is final — once submitted, you can't change your answers, so double-check before confirming.

> Tip: if instant feedback is enabled for this assignment, you can click **Check answer** on any question first to see if you're on the right track before submitting.

Viewing Your Results

1 Your result

Right after submitting, you see your overall score, AI-generated feedback on your performance, and a question-by-question breakdown showing your answer next to the correct one.
